CARE AND MAINTENANCE

General Cleaning

Cleaning and routine care of natural stone composite is simple through the use of warm water and a mild detergent or domestic spray-and-wipe cleaner, such as *Magiclean Stain & Mold*.

Use only soft damp cloth or cellulose sponge for cleaning and wiping.

General Maintenance

The homogeneous and non-porous nature of our natural stone composite resists short term exposure to staining, such as tea, coffee, wine, and other coloured non-corrosive liquid. Contact of spills over an extended period of time may impregnate the stone surface and causes mild staining. However, this can be easily removed by gentle hand polishing on the stained area using 600-grit sandpaper dry polishing for matte finished surface and >800-grit sandpaper wet polishing for gloss finished surface.

Caution:

The sandpaper polishing techniques cannot be applied onto stone composite that blends with UPR (Unsaturated Polyester Resin). UPR will turn yellowish "yellowing effect" and often sprayed with a layer of protective gel-coating and are not homogeneous. Polishing will diminish the layer of gel-coating; hence exposing the surface that will tarnish over time.

AVOIDANCES

1

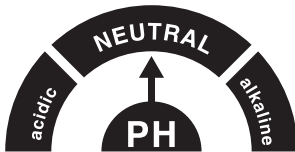

DO NOT use strong chemicals and corrosive cleaning agents.

2

DO NOT use paint removers or strippers such as Trichloroethane or Methyl Chloride.

3

DO NOT expose surface to low pH of <math><4.5</math> or high pH >8.5.

4

DO NOT subject the surface to sharp objects, such as tools and equipment.

5

DO NOT subject the surface to naked flame.
